2025–2026

1. Introduction

This document presents the progress report of the project titled **"Note Sharing Web Application."**
The project aims to develop a web-based platform that allows students to upload, share, and download academic notes in a secure and organized manner. This application addresses the problem of scattered study materials and lack of centralized access to notes.

---

2. Problem Definition

Students often depend on informal methods such as messaging apps or emails to share notes, which results in:

- Loss of important study material
- Difficulty in organizing notes
- Limited access to resources

The proposed system provides a centralized, structured, and user-friendly platform for note sharing.

---

3. Objectives of the Project

The objectives of this project are:

- To develop a web application for sharing academic notes
- To provide secure user authentication
- To allow users to upload and download notes easily
- To organize notes based on subject and semester
- To improve accessibility to study materials

---

4. Project Scope

The scope of the project includes:

- User registration and login
- Uploading notes in digital format
- Viewing and downloading notes
- Basic user dashboard

- Database management using MySQL

Future enhancements may include:

- Admin panel
- Note rating system
- Mobile application support

---

5. Tools and Technologies Used

Frontend

- HTML
- CSS
- JavaScript

Backend

- PHP

Database

- MySQL

Server

- XAMPP (Apache & MySQL)

Development Tools

- Visual Studio Code
- Web Browser (Google Chrome)

---

6. System Design Overview

The system follows a **client-server architecture**:

- The client interacts through a web browser
- The server processes requests using PHP
- The database stores user and note information

---

7. Database Design

Two main tables have been designed:

Users Table

Stores user registration details such as name, email, and password.

Notes Table

Stores note information such as title, subject, semester, and file location.

---

8. Work Completed So Far

The following tasks have been successfully completed:

- Installation of XAMPP server
- Setup of project directory structure
- Creation of database and tables
- Database connectivity using PHP
- User registration module
- User login and logout module
- File upload functionality
- Notes display and download feature

---

9. Current Status of the Project

The project is currently in the **development phase**.
Core functionalities such as authentication, file upload, and file access are implemented and working successfully on the local server environment.

1. Install XAMPP

This gives you:

- Apache (server)
- MySQL (database)
- PHP

👉 Download: https://www.apachefriends.org
(Install → Next → Next → Finish)

2. Code Editor

- **VS Code** (recommended)

🔹 **STEP 2: Start Server**

1. Open **XAMPP Control Panel**
2. Click **Start** on:
   - Apache
   - MySQL
3. If both turn **green**, you're good ✅

Create a folder:

```nginx
note_sharing
```

Inside it, create:

```pgsql
note_sharing/
│
├── db.php
├── index.php
├── register.php
├── login.php
├── dashboard.php
├── upload.php
├── logout.php
```

---

10. Challenges Faced

- Initial configuration issues with phpMyAdmin
- MySQL server startup errors
- Understanding file upload handling in PHP

These challenges were resolved through proper configuration and testing.

---

11. Work Remaining

The following tasks are yet to be completed:

- User interface enhancement using CSS
- Admin panel implementation
- Error handling and validation
- Final testing and debugging
- Project documentation and report submission

---

12. Expected Outcome

Upon completion, the project will provide a reliable and user-friendly web platform for sharing academic notes, helping students access study materials efficiently.

---

13. Conclusion

The development of the **Note Sharing Web Application** is progressing as planned. The implemented modules demonstrate the feasibility of the system, and the remaining tasks will further enhance functionality and usability. The project is expected to be completed successfully within the scheduled timeline.
